```
public class TcpClientSample
{
    public static void Main()
    {
        byte[] data = new byte[1024]; string input;
        TcpClient server;
        try{
            server = new TcpClient("...", port);
        }catch (SocketException){
            Console.WriteLine("Unable to connect to server");
            return;
        }
        NetworkStream ns = server.GetStream();
        int recv = ns.Read(data, 0, data.Length);
        stringData = Encoding.ASCII.GetString(data, 0, recv);
        Console.WriteLine(stringData);
        while(true){
            Console.WriteLine();
            input = Console.ReadLine();
            if (input == "exit") break;
            newChild.Properties["..."].Add
            ("Auditing Completed");
            newChild.Close();
            ...
        }
    }
}
```
